Solar PV Panel

Maximum Power

Load Test

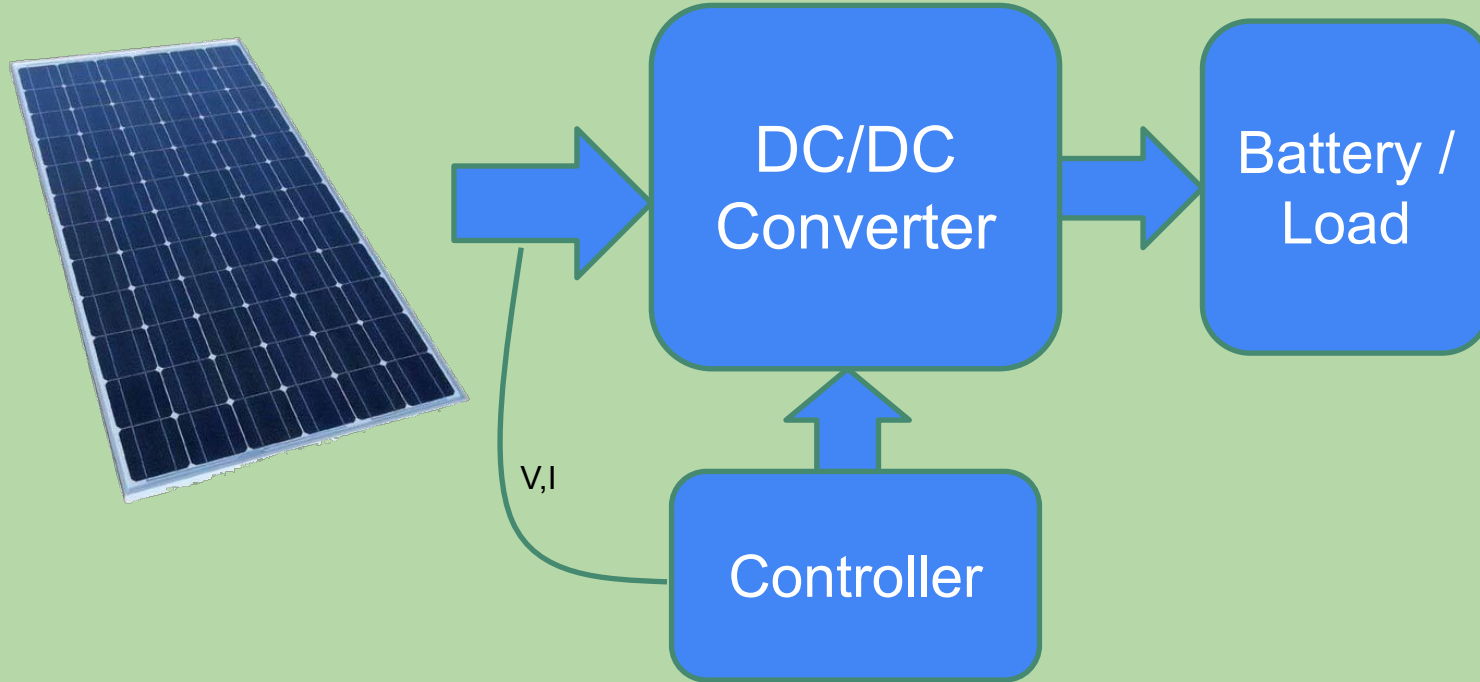

Maximum Power Point

MPPT

Maximum Power Point Tracking is algorithm that included in charge controllers used for extracting maximum available power from PV module under certain conditions

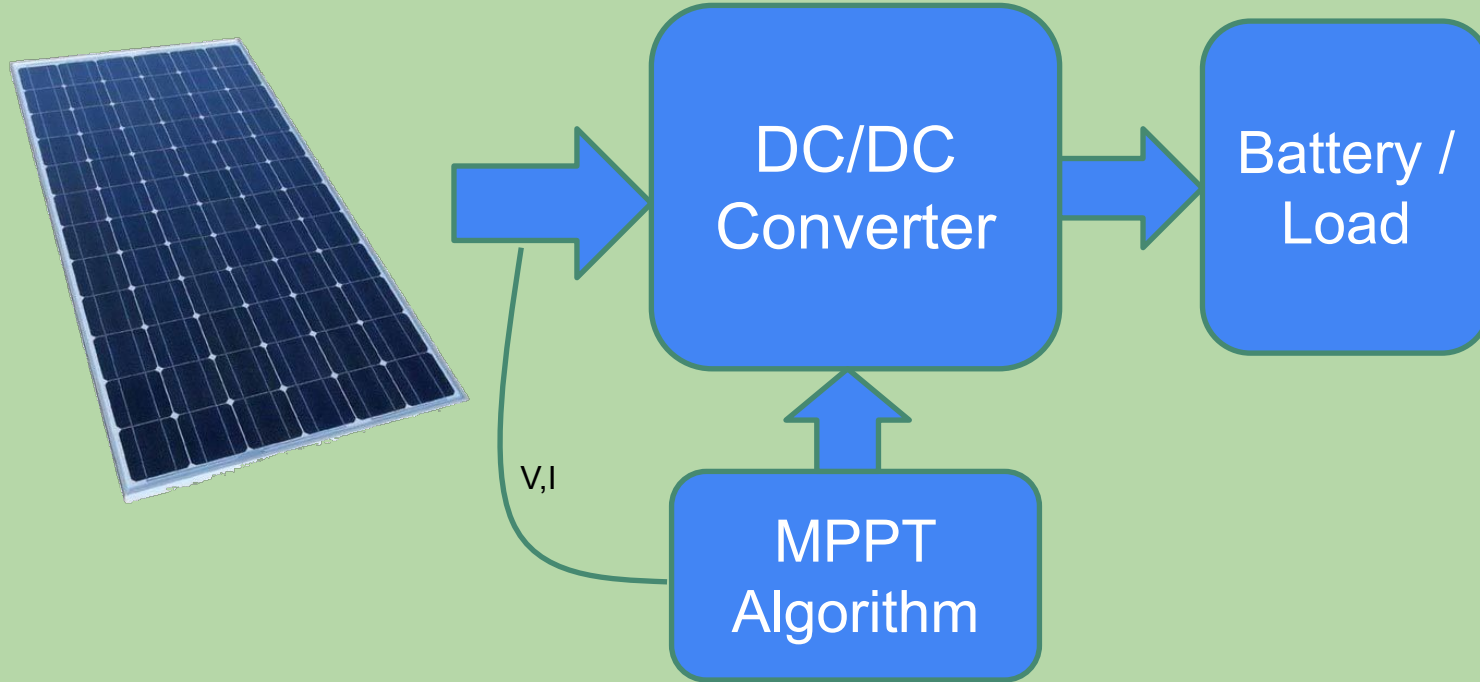

Maximum power varies with solar radiation, ambient temperature and solar cell temperature.

Working Principle – power converter

MPPT is to extract the maximum available power from PV module by making them operate at the most efficient voltage

MPPT Controller

Boost Converter

**Power :
250W**

Design Calculation

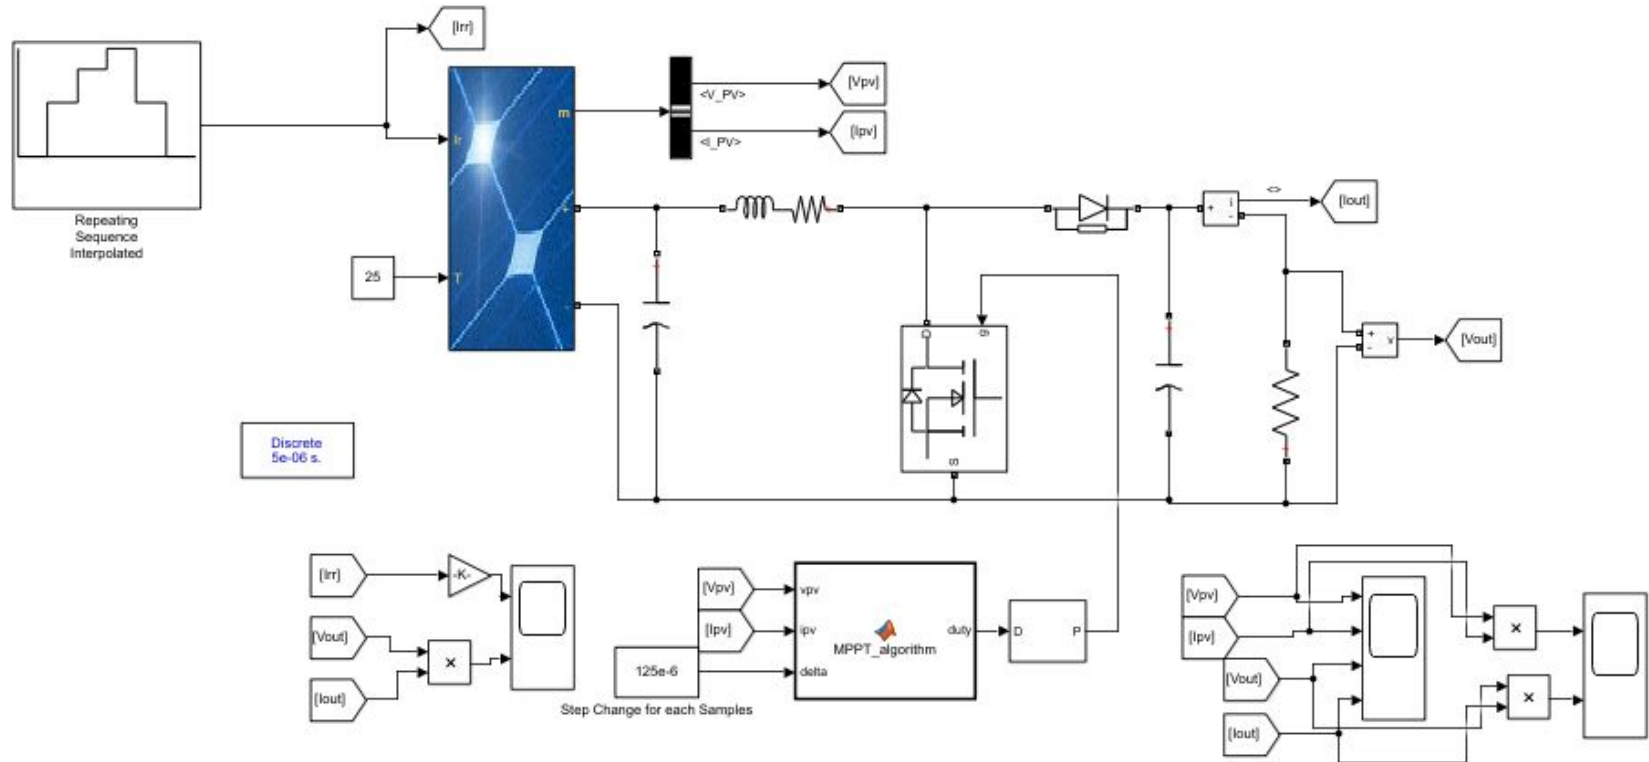

Inductance (L) =

$$\frac{V_{in_min} * D}{F_s * \Delta I_{Lmax}}$$

Capacitance (C) =

$$\frac{I_{omax} * D}{F_s * \Delta V_c}$$
